1.INTRODUCTION

1.1 PROJECT OVERVIEW

Agriculture is done manually from ages. As the world is trending into new technologies and implementations it is a necessary to trend up with agriculture also. Migration of people from rural to urban is a hindrance in agriculture. So to overcome this problem we have proposed an IOT and smart agriculture system. IoT based Smart Farming improves the entire Agriculture system by monitoring the field in real-time. With the help of sensors and interconnectivity, the Internet of Things in Agriculture has not only saved the time of the farmers but has also reduced the extravagant use of resources such as Water and Electricity. It keeps various factors like humidity, temperature, soil etc. under check and gives a crystal clear real-time observation.

Smart agriculture is taking over farms of all sizes by rapid speed. It is becoming a part of a movement that is known as the third green revolution. It involves the use of modern IOT devices such as security cameras, sensors, drones and actuators to manage agricultural yields. Smart agriculture has increased in profitability by providing help to both farmers and consumers.

1.2 PURPOSE

IoT in agriculture is designed to help farmers monitor vital information like humidity, air temperature and soil quality using remote sensors, and to improve yields, plan more efficient irrigation, and make harvest forecasts. Also it enables farmers to reduce waste and enhance productivity ranging from the quantity of fertilizer utilized to the amount of water used for irrigating a field. It further ensures that the farm produce is transported in the most optimal and transparent manner.

2.LITERATURE SURVEY

2.1 EXISTING PROBLEM:

- The most common challenge for the Internet of Things in agriculture is connectivity. Every area doesn't have proper internet connectivity.
- The second most common challenge for Internet of Things based Advanced Farming is the lack of awareness among consumers.
- Due to various service providers, it becomes really difficult to maintain interoperability between different IoT systems.

- 5) Smart Agriculture Using IoT Multi-Sensors: A Novel Watering Management System-Tran Anh Khoa ^{1,2} , Mai Minh Man ¹,Tan-Y Nguyen ^{3,*} , VanDung Nguyen ⁴ and Nguyen Hoang Nam ²

2.3 PROBLEM STATEMENT:

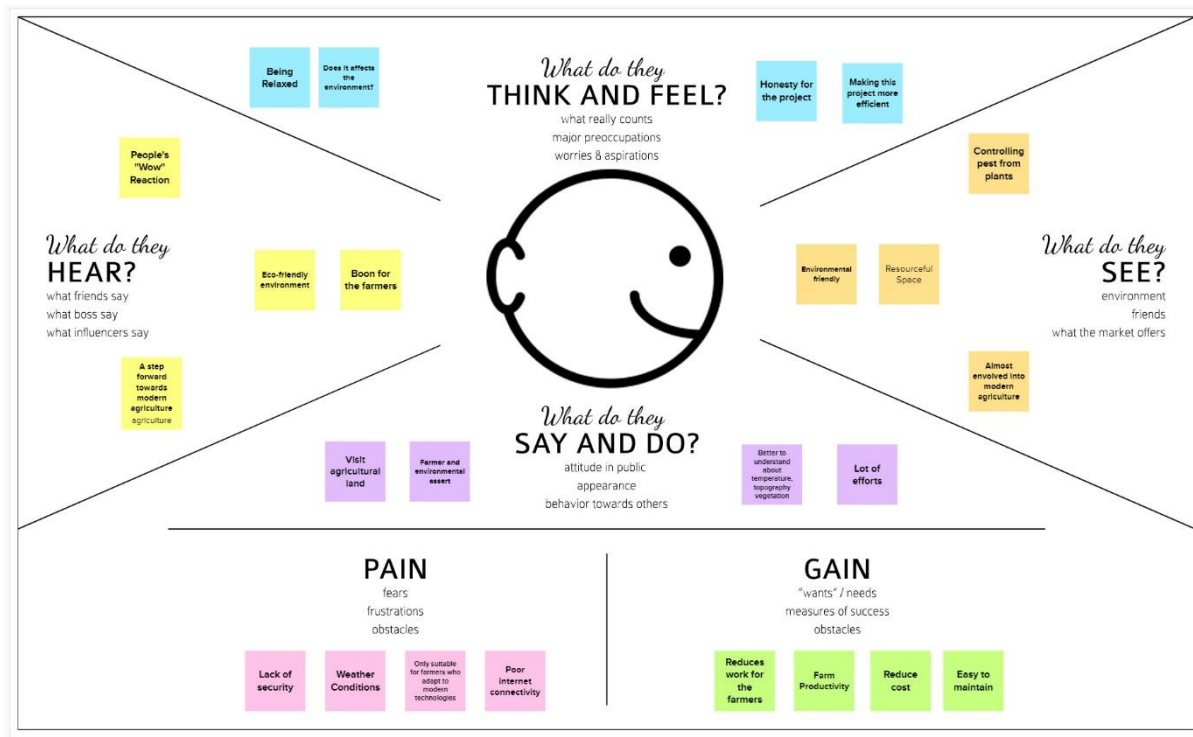

The traditional agriculture cannot meet the requirements of modern agriculture which requires high-yield, high quality and efficient output. Thus, it is very important to turn towards modernization of existing methods and using the information technology and data over a certain period to predict the best possible productivity and crop suitable on the very particular land. The adoptions of access to high-speed internet, mobile devices, and reliable, low-cost satellites (for imagery and positioning) are few key technologies characterizing the precision agriculture trend.

Customer Problem Statement Template:

3.IDEATION AND PROPOSED SOLUTION

3.1 EMPATHY MAP CANVAS:

3.2 IDEATION AND BRAINSTORMING:

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions or your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

- 15 minutes to prepare
- 1 hour to brainstorm
- 2-3 people recommended

Share template feedback

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

- 1. Have guidelines: Give your virtual participants a few pointers and avoid an endless free-for-all brainstorming session.
- 2. Set the goal: How much time do you have? Are you looking for a single idea or a range of ideas?
- 3. Have fun: It's not just about the ideas, it's about the process. Try to make it a fun and productive session.

Open article

Define your problem statement

What problem are you trying to solve? Define your problem as a new stage in a process. This will be the focus of your brainstorm.

15 minutes

WHY? There are many ideas out there, but you need to focus on the most important ones. This will help you to narrow down your ideas and focus on the most important ones.

Key rules of brainstorming

- 1. No criticism: No criticism or evaluation of ideas during the brainstorming session.
- 2. Quantity over quality: The more ideas, the better.
- 3. Build on others: Try to build on the ideas of others.
- 4. Go for quantity: The more ideas, the better.
- 5. If possible, be specific: Be as specific as you can when describing your ideas.

Brainstorm

Write down any ideas that come to mind that address your problem statement.

15 minutes

RAHUL S

PRAKSHI T

ALFIN BELAN P

DIHANUSIGA S

15 minutes

Group ideas

Take turns sharing your ideas while clustering similar or related ones as you go. In the last 10 minutes, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

10 minutes

15 minutes

Group ideas

Take turns sharing your ideas while clustering similar or related ones as you go. In the last 10 minutes, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

10 minutes

15 minutes

Prioritize

Your team should all be on the same page about what's important moving forward. Place your ideas on this grid to determine which ideas are important and which are feasible.

10 minutes

Importance

Feasibility

15 minutes

After you collaborate

You can export the mural as an image or pdf to share with members of your company who might find it helpful.

Quick add-ons

- Share the mural: Share a new link to the mural with stakeholders to keep them in the loop about the outcomes of the session.
- Export the mural: Export a copy of the mural as a PNG or PDF to attach to emails, include in slides, or save to your drive.

Keep moving forward

- Strategy Mapprint: Define the components of a new idea or strategy.
- Customer experience journey map: Understand customer needs, motivations, and obstacles for an experience.
- Strengths, weaknesses, opportunities & threats: Identify strengths, weaknesses, opportunities, and threats (SWOT) to develop a plan.

Share template feedback

3.3 PROPOSED SOLUTION

In olden days, Traditional farming methods were used where the soil and livestock were managed manually. These methods were time consuming and expensive. And also sometimes the predictions of human were not accurate also difficult to detect outbreaks at an early stage. The motive of smart farming is to increase the quality and quantity of agricultural goods at the same time keeping in mind the cost and energy usage. IoT is responsible for modernizing the agricultural field by using proficient methods and instruments to manage crops, soil and animals. This in turn has led to decrease in the waste generation and a phenomenal increase in productivity. This is smart agriculture using IoT.

3.4 PROBLEM SOLUTION FIT

4.REQUIREMENT ANALYSIS

4.1 FUNCTIONAL REQUIREMENTS:

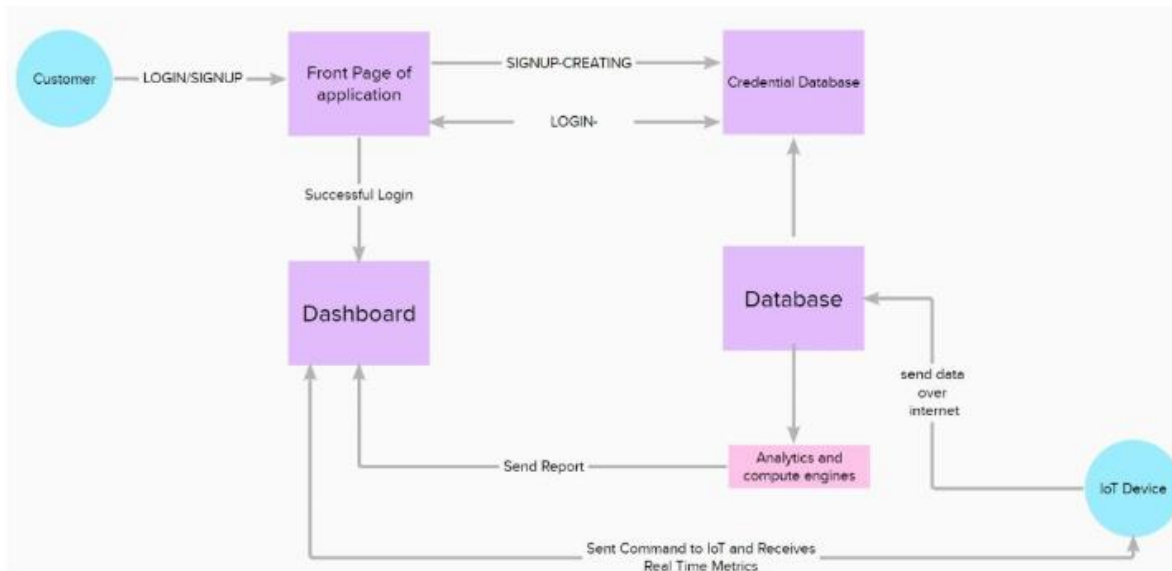

FRNo.	FunctionalRequirement(Epic)	SubRequirement(Story/Sub-task)
FR-1	IoTDevices	SensorsandWi-Fimodule.
FR-2	Software	WebUI, Node-red,IBMWatson,MITapp
FR-3	User registration	Register from registration through Gmail
FR-4	User conformation	❖ Conformation via mail ❖ Conformation via OTP
FR-5	System login	❖ Check authorization ❖ Check accesses

4.2 NON FUNCTIONAL REQUIREMENTS:

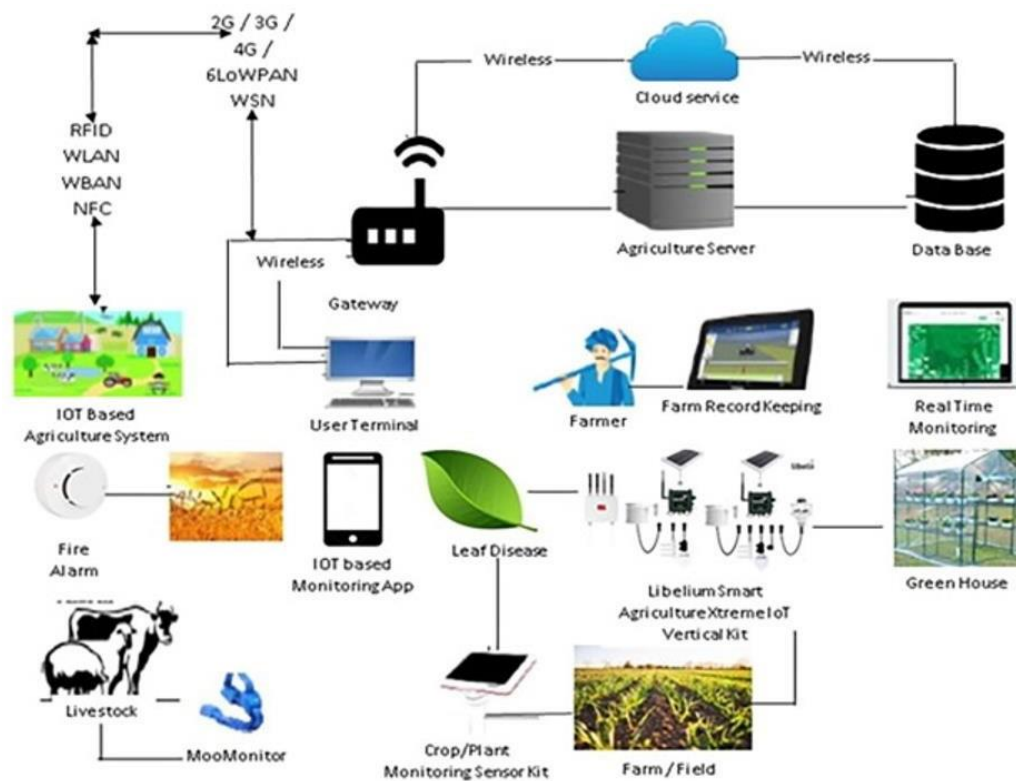

FRNo.	Non-FunctionalRequirements	Description
NFR-1	Usability	Usability specify the quality attributes of system. Timeconsumeabilityisless, Productivityishigh.
NFR-2	Security	It has low level of security features due to integration Of sensor data.
NFR-3	Reliability	Accuracy of data and hence it is Reliable.
NFR-4	Performance	Performance is high and highly productive.
NFR-5	Availability	With permitted network connectivity the application is accessible.
NFR-6	Scalability	It is perfectly scalable many new constraints can be added.

5.PROJECT DESIGN

5.1 DATA FLOW DIAGRAM:

5.2 SOLUTION AND TECHNICAL ARCHITECTURE:

USER STORIES:

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user)	Registration	USN-1	As a user, I can register for the application by entering my email, password, and confirming my password.	I can access my account / dashboard	High	Sprint-1
		USN-2	As a user, I will receive confirmation email once I have registered for the application	I can receive confirmation email & click confirm	High	Sprint-1
		USN-3	As a user, I can register for the application through Gmail		Medium	Sprint-1
	Login	USN-4	As a user, I can log into the application by entering email & password		High	Sprint-1
Customer (Web user)	Dashboard	USN-5	As a User can view the dashboard, and this dashboard include the check roles of access and then move to the manage modules.	I can view the dashboard in this smart farming application system.	High	Sprint 2
		USN-6	User can remotely access the motor switch	In the smart farming app	High	Sprint 3
Administrator			As a user once view the manage modules this describes the Manage system Admins and Manage Roles of User and etc.			Sprint 2

6.PROJECT PLANNING & SCHEDULING

6.1 Sprint Planning & Estimation:

The purpose of Sprint planning is to define what can be delivered in the sprint and how the work can be achieved. It kicks off the session by setting the agenda and focus.If done correctly,it also creates an environment where the team is motivated,challenged and can be successful.

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority
Sprint-1	Simulation creation	USN-1	Connects sensors and Arduino with python code	2	High
Sprint-2	Software	USN-2	Creating device in the IBM Watson IoT platform,workflow for IoT scenarios using node- red.	2	High
Sprint-3	MIT app inventor	USN-3	Develop an application for the smart farmer project using MIT app inventor.	2	High
Sprint-3	Dashboard	USN-3	Design the modules and test the app.	2	High
Sprint-4	Web UI	USN-4	To make the user to interact with the software.	2	High

6.2 Sprint Delivery Schedule:

This consist of sprints with respective to their duration,sprint start and end date and the releasing data.

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022		05 Oct 2022
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022		12 Oct 2022
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022		15 Oct 2022

7.CODING AND SOLUTIONING

PYTHON CODE:

```

Device Details:

The screenshot shows the IBM Watson IoT Platform interface. The top navigation bar includes "Browse", "Action", "Device Types", and "Interfaces". The "Browse" tab is selected. The main content area displays a table of recent events for a device. The table has four columns: "Event", "Value", "Format", and "Last Received". The events are listed as "IoTSensor" with various JSON payloads. The "Last Received" column indicates "a few seconds ago" for each event. The bottom of the table shows "Items per page 50" and "1-1 of 1 item".

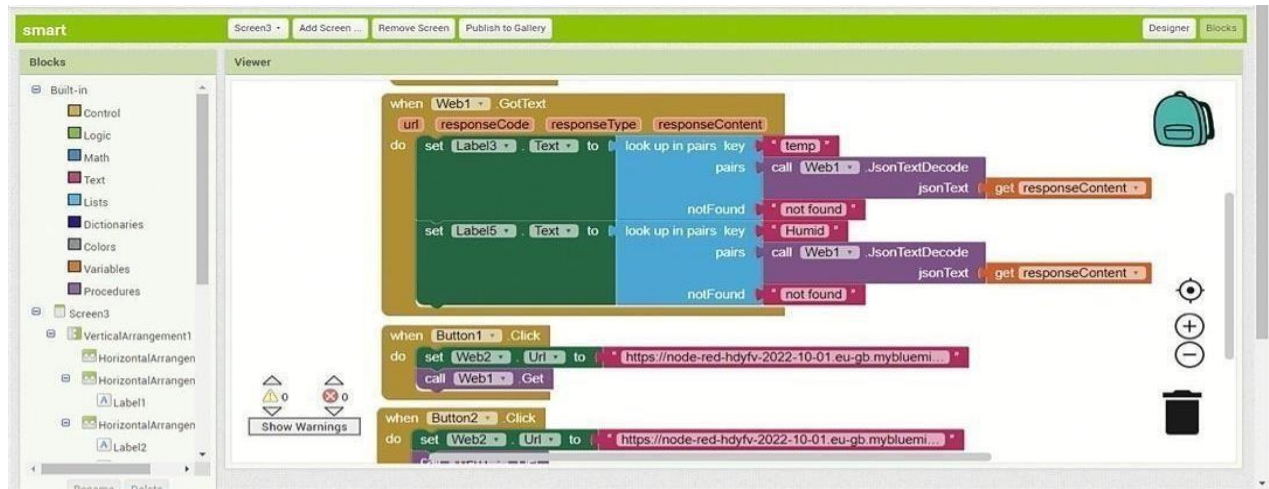

Event	Value	Format	Last Received
IoTSensor	{"temp":84,"Humid":60,"soilmoisture":23}	json	a few seconds ago
IoTSensor	{"temp":35,"Humid":9,"soilmoisture":35}	json	a few seconds ago
IoTSensor	{"temp":92,"Humid":29,"soilmoisture":81}	json	a few seconds ago
IoTSensor	{"temp":60,"Humid":79,"soilmoisture":15}	json	a few seconds ago
IoTSensor	{"temp":42,"Humid":19,"soilmoisture":81}	json	a few seconds ago

The screenshot shows the IBM Watson IoT Platform interface. The top navigation bar includes "Browse", "Action", "Device Types", and "Interfaces". The "Browse" tab is selected. The main content area displays the "Browse Devices" page. The page has a header "Browse Devices" and two buttons: "All Devices" and "Diagnose". Below the header, there is a description: "This table shows a summary of all devices that have been added. It can be filtered, organized, and searched on using different criteria. To get started, you can add devices by using the Add Device button, or by using API." Below the description, there is a search bar labeled "Search by Device ID". To the right of the search bar, there is a "Device Simulator" toggle switch and a filter icon. Below the search bar, there is a table of devices. The table has six columns: "Device ID", "Status", "Device Type", "Class ID", and "Date Added". The table contains one device with ID "12344321", status "Connected", device type "iot_device", class ID "Device", and date added "Nov 20, 2022 10:55 PM". The bottom of the table shows "Items per page 50" and "1-1 of 1 item".

The image shows a mobile application interface for "Smart Agriculture". At the top is a green status bar with "4G" signal strength indicators, the time "10:43", and a battery icon showing "26%". Below this is a grey header bar labeled "Screen1". The main content area has a light grey background. It features the title "Smart Agriculture" in large bold black text. Below the title are three labels: "Temperature", "Humidity", and "Moisture", each in bold black text. To the right of each label is a white rectangular input field with a light grey border. The "Temperature" field contains the text "Temperature value", the "Humidity" field contains "Humidity value", and the "Moisture" field contains "Moisture value". At the bottom of the interface are two grey rectangular buttons with black text: "MOTOR ON" on the left and "MOTOR OFF" on the right. A thin grey line is visible at the very bottom of the screen, likely representing the home indicator bar.

8. TESTING

8.1 TEST CASES:

This report shows the number of test cases that have passed, failed, and untested

Section	Total Cases	Not Tested	Fail	Pass
Print Engine	7	0	0	7
Client Application	51	0	0	51
Security	2	0	0	2
Outsource Shipping	3	0	0	3
Exception Reporting	9	0	0	9
Final Report Output	4	0	0	4
Version Control	2	0	0	2

9. RESULTS

9.1 PERFORMANCE METRICS:

The system's performance is determined by its accuracy. It should detect leakage as soon as possible. It should be sensitive towards leakage and should be reliable.

10. ADVANTAGES AND DISADVANTAGES

ADVANTAGES

- Increased work efficiency. One of the greatest things about Smart Farming is its potential to save valuable time. ...
- Improved fuel efficiency. Smart Farming allows farmers to be much more precise. ...

- Reduced consumables. ...
- Increased yields.

DISADVANTAGES

The main disadvantage is the time it can take to process the information.

Farmers are so busy with harvesting and caring for their crops that they may not have time to process data. There are also issues with the water supply, as well as issues with the cost of the technology, which can be quite expensive.

11. CONCLUSION

In IoT-based smart farming, a system is built for monitoring the crop field with the help of sensors (light, humidity, temperature, soil moisture, etc.) and automating the irrigation system. The farmers can monitor the field conditions from anywhere.

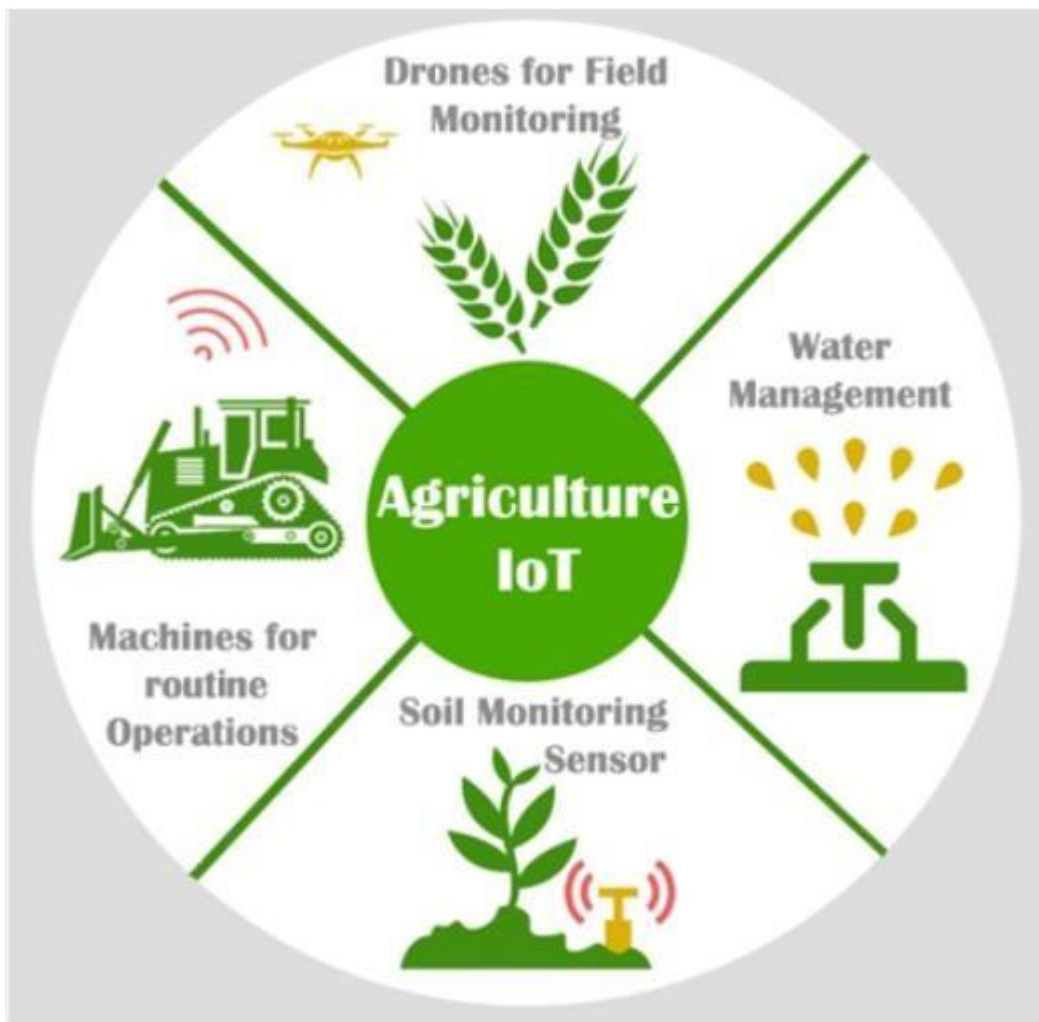

12. FUTURE SCOPE

Through collecting data from sensors using IoT devices, you will learn about the real-time state of your crops. The future of IoT in agriculture allows predictive analytics to help you make better harvesting decisions. Pattern forecasting can be used by farmers to predict weather patterns and crop harvesting.

13. APPENDIX

"Smart farming" is an emerging concept that refers to managing farms using technologies like IoT, robotics, drones and AI to increase the quantity and quality of products while optimizing the human labor required by production. The Internet of Things (IoT) has provided ways to improve nearly every industry imaginable. In

agriculture, IoT has not only provided solutions to often time-consuming and tedious tasks but is totally changing the way we think about agriculture. What exactly is a smart farm, though? Here is a rundown of what smart farming is and how it's changing agriculture.
